BACKGROUND

The Santa Fe Solid Waste Management Agency (Agency) is requesting proposals from experienced engineering firms to provide engineering services for landfill gas collection system at the Caja del Rio Landfill.

The Caja del Rio Landfill (Landfill), owned and operated by the Agency, was opened in 1997 and occupies an area of approximately 430 acres. The Landfill contains a leachate evaporation pond, effluent storage pond, and approximately 78 acres permitted through the New Mexico Environment Department for disposal of solid waste.

Since April 2010, the Landfill has an active landfill gas collection and control system that operates on a scheduled, intermittent basis. The system consists of 15 vertical landfill gas extraction wells, below-grade landfill gas header and lateral piping, a condensate management system, and an enclosed John Zink flare, model number ZTOF. The enclosed flare is an approximate 900 cubic feet per minute unit, which is approximately 30 feet tall. A Landtec continuous methane analyzer and Thermal Instruments flow meter are in place.

The Landfill is subject to New Source Performance Standard (NSPS) collection and control requirements. As such, the gas system must operate under specific NSPS requirements. The 15 LFG wells must be monitored and adjusted to meet the compliance requirements of NSPS, as well as required Startup, Shutdown, and Malfunction (SSM) requirements as set forth in 40 CFR 63, Subpart AAAAA.
SCOPE OF SERVICES

This scope of services is to provide the Agency with air-related compliance, permitting, and design services related to the landfill gas collection and control system (GCCS). It also includes GCCS operations and maintenance services as set forth in the following scope of services.

1. PERMITTING, COMPLIANCE REPORTING, AND DESIGN SERVICES

NSPS, SSM, and Title V Reporting

Services in this task will encompass semi-annual NSPS, startup, shutdown, and malfunction (SSM), and Title V reporting. This includes one reporting event in April 2014 and one in October 2014 (all of these reports are currently synchronized on this schedule).

Title V reporting requires reporting of compliance deviations semi-annually and certification of overall compliance with all air-related requirements annually. For this Task, the Consultant will prepare the Title V reports.

The rule requiring the SSM Plan, requires that semi-annual report filings be submitted detailing many aspects of the gas system’s operation. The required SSM report consists of a summary of SSM events, which will be determined from the SSM forms that the gas system operator (i.e., Consultant) will be required to prepare. NSPS reporting requires additional documentation, including the following per 40 CFR §60.757(f): all collection well exceedances, a summary of quarterly surface scans, documentation of any gas system expansions conducted during the reporting period, a summary of gas system downtime in excess of five days, and any flare free-venting in excess of one hour.

The Consultant will prepare Title V, NSPS, and SSM report drafts for Agency review. Upon approval, at the Agency’s preference, the Consultant will transmit these reports to the Agency for NMED submittal or submit them on the Agency’s behalf.

Federal Greenhouse Gas (GHG) Emissions Reporting Services

The landfill is subject to Federal Greenhouse Gas Reporting. This task will address requirements regarding the Federal mandatory GHG reporting rules. The proposed scope for this task will include the preparation and submittal of the required GHG emissions estimates and associated information required by the GHG reporting rule. Online reporting through EPA’s e-GGRT system will be used to file information related to the GHG reporting rule.

The Consultant must collect and process all required data from the previous calendar year for each year of reporting, including waste intake values, and for the gas system, landfill gas flows and methane content. This information gathering will be similar to the normal emissions inventory process, but will be much more detailed and documented for the Agency’s files. Utilizing equations provided in the EPA rule, the Consultant will convert the required information that has been gathered into the required GHG emissions.
Upon entering the required information into the online reporting system, the Consultant will work with the Landfill’s designated representative to review and certify the data to EPA.

**New Mexico Emissions Inventory**

This task includes the State of New Mexico emissions inventory for the Landfill. This inventory, which will be filed online, is typically due by April 1 of each year for the emissions from the prior calendar year. The online format required by NMED; referred to as the NMED Air Emissions Inventory Reporting (AEIR) tool must be used. Following completion of this work, Agency personnel will check and finalize the submittal to NMED. A copy of the emission spreadsheets will be provided to the Agency and NMED.

**Permitting**

This task will include any necessary permitting required during the contract period for new sources, related to the pending 20-year permit renewal and vertical/lateral expansion. The next Title V permit renewal will be due February 15, 2016.

**Landfill Gas System Design Services**

Through the contract period, the Agency may need design services related to the expansion of the GCCS. This work will likely include the production of construction drawings, specifications, and bid documents. It may also include support during the bidding phase and Construction Quality Assurance/Engineering support during construction.

2. **GAS SYSTEM OPERATIONS AND MAINTENANCE**

**Routine Services**

The well field will be monitored on a twice-monthly basis. During these visits routine services for the well field will include:

- Monitoring and adjusting the 15 extraction wells so that they meet NSPS requirements for temperature, oxygen, and pressure.
- Obtaining landfill concentrations of methane, oxygen, carbon dioxide, and balance gas at each extraction well; in addition to individual extraction well temperatures and pressures.
- Assuring that extraction wells are functioning properly and/or without damage.
- Inspections will also ensure that there are no broken hoses, pipes, thermometers, sample ports, loose connections, air leaks, and/or condensate build-up in the wellheads or well sample ports.
- Performing inspections of condensate sumps to determine if they are functioning properly and are in good condition.

Initial reading and adjusted readings, for each well and the blower/flare station (BFS), will be recorded during each monitoring event.
The Consultant will record at the blower/flare station all pertinent performance parameters such as:

- Flare temperature prior to and after wellfield adjustments have been made.
- Concentrations of methane, carbon dioxide, oxygen, and balance gas prior to and after well field adjustments have been made.
- Vacuum pressures and discharge pressure of the blower.
- Blower hours, amps, vibration, and hertz.

Maintenance services, as recommended by John Zink for the flare, blower, and associated Landfill Gas Control and Collection System equipment, will also be performed.

In addition to routine maintenance, the Consultant will be responsible for providing necessary labor, equipment, and tools to repair and/or replace defective equipment as needed. Prior to replacement or repair of the equipment, the Consultant will advise the Agency of problems and discuss requesting advice from the manufacturer regarding warranties on the equipment in question. All maintenance, calibrations, and repair performed by field staff will be recorded in the on-site field log book for reference.

Data from the continuous recorder, which records flow, temperature, pressure and methane concentrations, will be downloaded into electronic files submitted to the Agency and their designated agents.

A monthly report detailing the past month’s activities, all collected data, and recommendations on problem areas/equipment will be submitted by the 15th day of the following month. All SSMs that occurred during the month will be noted on appropriate SSM Forms, and will be included in the monthly report submitted to the Agency. All collected data collected from the well field, blower/flare station, continuous methane monitor, and any noted problem areas along with recommendations will also be submitted to the Agency with the monthly report.

Once the Consultant completes well field adjustments and collects all data, they should then perform maintenance for the month or quarter that is required for specific equipment. Any needed repairs should also be performed at this point, if they are not completed prior to monitoring and adjustment of the well field.

**Surface Emissions Monitoring**

A task will be included to perform NSPS-required quarterly surface emissions monitoring (SEM). The Consultant will walk the entire area of the landfill that is subject to NSPS regulations (basically the area where extraction wells are located), at 30-meter spacing in a grid pattern. The monitoring instrument must be calibrated prior to monitoring. Any areas where methane is detected at concentrations over 500 ppm will be immediately flagged, numbered, and marked on a site map. After the Consultant has finished walking the area, they will contact Agency staff to indicate where high concentrations of methane are located. The Consultant will assist Agency staff in remediating these areas so that emissions are less than 500 ppm.
Where surface emissions have exceeded 500 ppm, the area will need to be reevaluated within 10 days after remediation of the exceeded area has been completed and then 30 days after the initial exceedance reading. After the 30-day recheck and concentrations below 500 ppm have been obtained, the Consultant must provide all the collected data in the corresponding monthly report that details the findings of the surface emissions monitoring event. The report will contain all pertinent data derived from monitoring, along with associated site plans and the locations of any exceedances.

**Non-Routine Services**

Non-routine work will consist of repair and/or replacement of equipment that can be scheduled in advance. Non-routine work can range from minor repairs, such as broken wellheads, to complete overhaul of GCCS equipment components and additional components as needed to maintain compliance with NSPS requirements.

In addition, non-routine work may also consist of recommendations concerning the efficiency of the collection system. Special assignments, such as engineering, system design, studies, plans/drawings, and various services related to LFG recovery and efficiency, fall into the category of non-routine services. These special assignments will be authorized and prioritized by the Agency.

In 2014, the ends of the leachate cleanout riser across Cell 4 (one end in Cell 4A and one end in Cell 4B) will need to be tied-into the existing gas system. This work will entail adding HDPE piping from the existing GCCS header piping to the risers. In addition, a wellhead, similar to the existing wellheads for the current GCCS will be required at each end so that landfill gas can be controlled as needed.

Any cost incurred by the Offeror in preparation, transmittal, presentation of any proposal or material submitted in response to this RFP shall be borne solely by the Offeror.
At its discretion and without notice, the Agency reserves the right to alter the membership and size of the evaluation committee. The evaluation committee will provide written evaluations based on the evaluation criteria and weighted values shown below.
